

Review Articles

Review Articles contain two main sections of Abstract and Full Text. **Abstract** has

- Context
- Evidence Acquisition
- Results
- Conclusions
- Keywords

Full Text contains

- **Context**- includes 1 or 2 sentences describing the clinical question or issue and its importance in clinical practice or public health.
- **Evidence Acquisition**- describes the data sources, including the research strategies, time of the study, and other sources of the materials used such as subsequent reference searches of retrieved articles. It explains the methods used for quality assessment and inclusion of the identified articles.
- **Results**- addresses the major findings of the review in an evidence-based, objective, and balanced style, emphasizing the available highest-quality evidence.
- **Conclusions**- clearly states the conclusions in order to answer the questions raised, if applicable, based on the conclusions of the available evidence, and it emphasizes how clinicians should apply the current knowledge.

Ethical Considerations

- Compliance with ethical guidelines
- Funding
- Author's contributions
- Conflict of interest
- Acknowledgements

References

In Review Article, the maximum number of

- references is 150
- illustrations or tables is 5
- words is 3500 (references included).
