
Best Reviewer of the May-June 2023 issue - Hamid Kalantari

Hamid Kalantari

Hamid Kalantari graduated in cell and molecular biology with a master's degree from the University of Tehran back in 2007. His enthusiasm for genetics and cell biology brought him to the Kariminejad-Najmabadi Pathology and Genetics Center, where he refined the fine art of cytogenetics.

Between 2008 and 2010, Hamid assumed leadership as the bone marrow cytogenetics supervisor, a position he held in high regard at the core. His pursuit of knowledge did not end there. Since 2011, he has been crafting his scientific biography as a formidable research scientist inside the Royan Institute's

Reproductive Biomedicine Department—a place where ideas flourish and scientific curiosity is fostered.

Hamid's research primarily focuses on the genetic aspects of male reproductive health. He delves into the study of genetic disorders that affect male fertility, sexual development, and reproductive function. His contributions to the field are evident through his numerous publications and presentations at global conferences. These works shed light on the influence of genetic factors on assisted reproductive technologies and their success rates. Furthermore, Hamid actively participates in the scientific community, particularly the Global Andrology Forum.

“Engaging in the demanding and thorough peer review process has proven to be an enlightening endeavor for me. It has granted me the opportunity to contribute to the credibility and progression of urological science. Through this procedure, I have acquired valuable insights into the obstacles to executing research projects and addressing significant clinical inquiries or current subjects. I regard it as an honor to play a minor role in the advancement of knowledge and optimal practices in the realm of urology. Herein, I would like to thank the editorial board of *Urology Journal* for the invitation to serve as a reviewer.”
